

Web Development Training

Please see the following links.

- navagis.com
- <https://developers.google.com/maps/documentation/javascript/>
- <https://developers.google.com/maps/web/>

Please do the exercise using the application scenario below.

1. Plot restaurants across Cebu.
2. Each restaurant will have at least 1 food specialty.
3. A layer panel can filter the restaurant type to show.
4. Each restaurant can keep track of the number of customers that visited.
5. Customers can get direction to the restaurant from current location.
6. Draw a circle or rectangle on the map and show the number of restaurants within the circle or rectangle.
7. Add any value adding feature like analytics to show relationships between patrons, restaurant and revenue.

Have your web application exercise published in pages.github.com. Send in what you've done, finished or not on the deadline, we'll still evaluate the output. You can consult or email Santi Mante at santi.mante@navagis.com.

Thanks!

Jorj Maceda

HR Director
